

INSTALLATION GUIDE

Leonie

Wall Sconce

Please read this guide in full before you start, and keep it for future reference.

BEFORE YOU BEGIN

Safety first

Take two minutes to read these notes. They protect you, your wall and your light.

Switch off the power at the main circuit panel before you start.

Never work on live wires.

Licensed electrician

Installation by a licensed electrician is strongly recommended.

Solid wall

Fix the mounting plate to a **stud or a wall able to carry the fixture weight**. Choose screws and anchors suited to your wall type.

Handle the wires with care

Do not pull on the wires. **Do not connect electricity** until the sconce is fully installed.

Bulb and heat

Turn the fixture off and **let it cool** before touching it. **Keep flammable materials away.**

Respect the rating

Use only the light source supplied or the one the fixture is rated for, and **never exceed the recommended power**.

Fragile diffuser

The diffuser can break if dropped. Hold the sconce with both hands while you fit it. Not a toy.

OVERVIEW

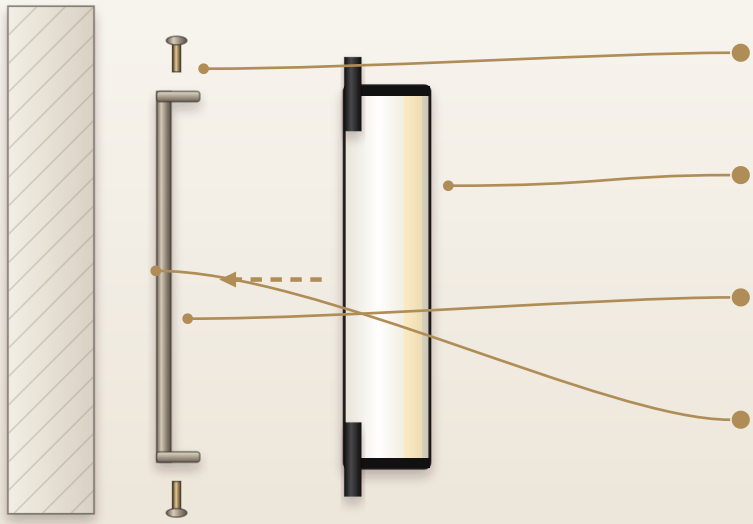

Installation at a glance

Three steps, in this order. The sconce goes on last.

1
Fix the plate
Screw the mounting plate to the wall with the 2 screws.

2
Connect the wires
Join the wall wires to the lamp wires and the ground.

3
Attach the sconce
Fit it on the plate and tighten the 2 screws.

Side screws
Lock the sconce to the plate

Frosted sconce body
Diffuses the light softly

Mounting plate
Screws to the wall

Wire connector
Joins the house wires to the lamp

What you will need

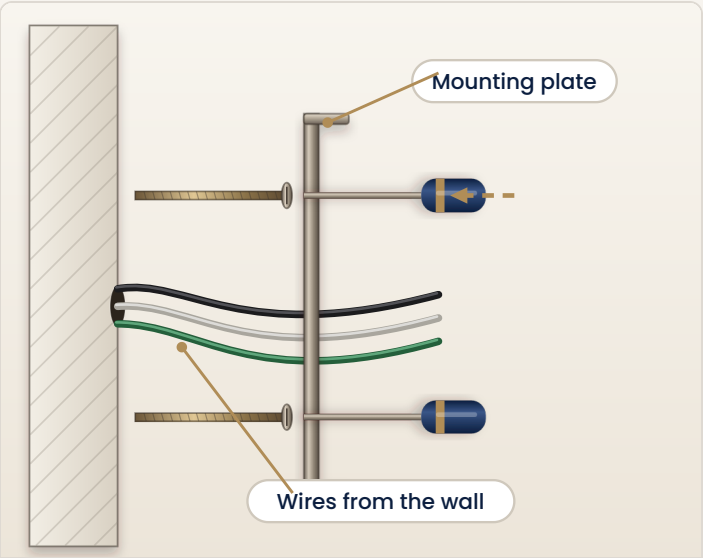

- Screwdriver
  for the plate and the side screws
- Wire connector
  to join the wall and lamp wires
- Stepladder
  stable, and a helper if possible

Good to know

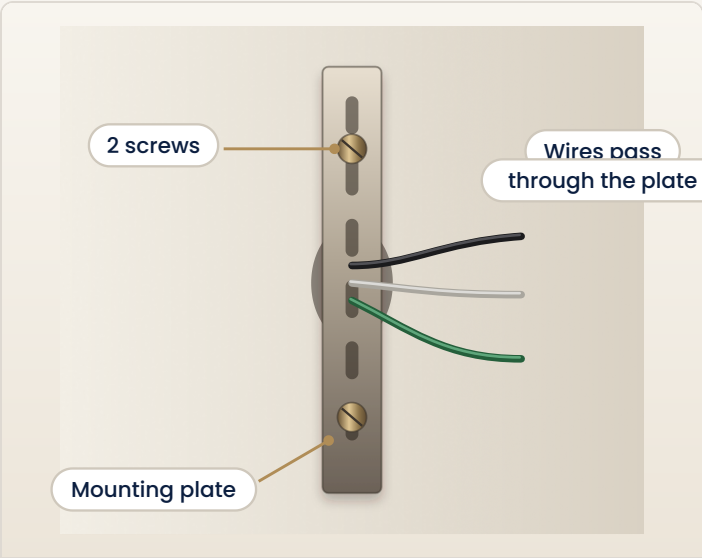

- **Wire colors:** black is live (L), white is neutral (N), green or bare copper is ground.
- **The ground wire** goes to the mounting plate.
- **Keep the 2 small screws** within reach: you need them in the last step.

1 *Fix the mounting plate to the wall*

Bring the wall wires through the plate first.

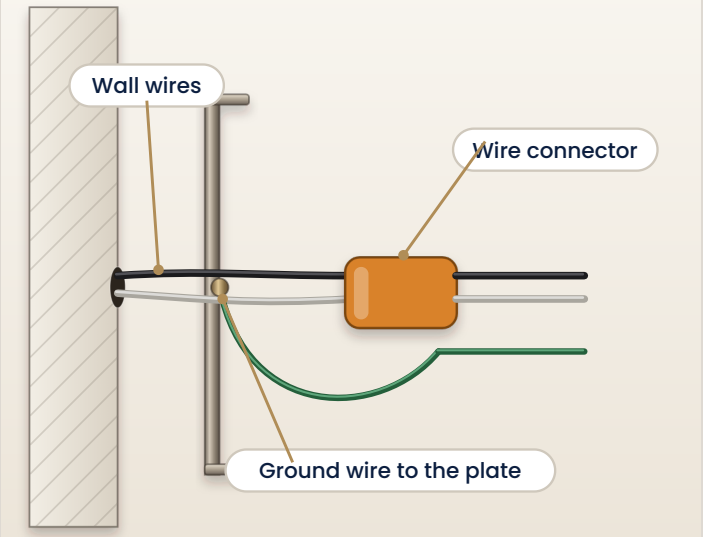

1.1 Pass the **wall wires** through the plate and drive the **2 screws** into the wall.

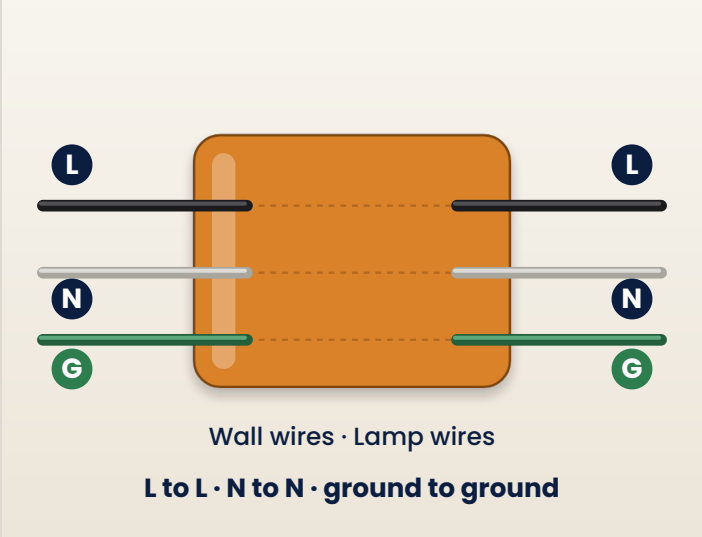

1.2 Tighten both screws until the **mounting plate** sits flat and firm. Leave the wires free.

2 *Connect the wires*

Match each wire with its twin.

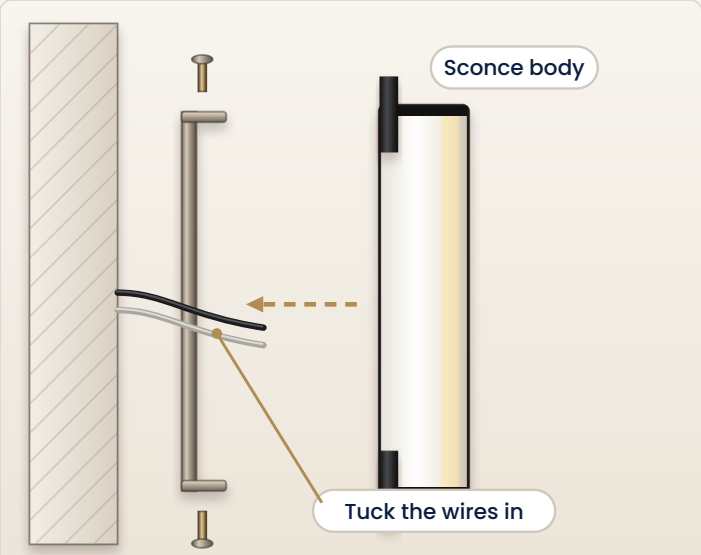

2.1 Join the wall wires to the lamp wires with the **wire connector**, and fix the **ground wire** to the plate.

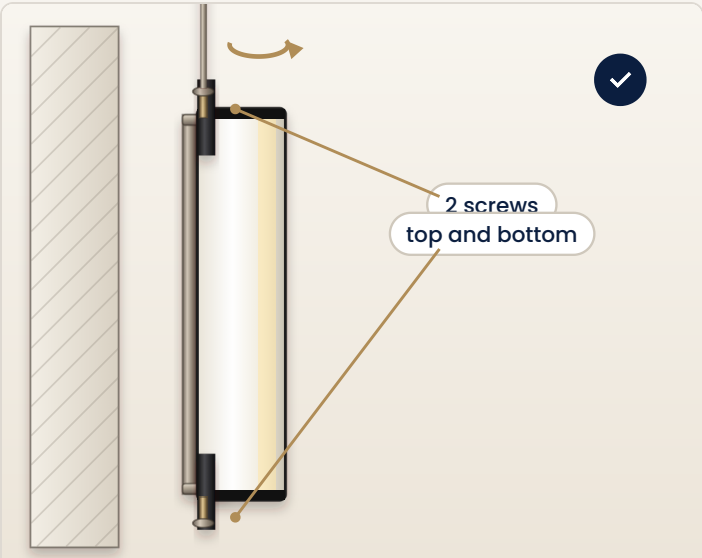

2.2 Check the code: **L to L**, **N to N**, ground to ground.

3 *Attach the sconce to the mounting plate*

The last step: the sconce locks onto the plate.

3.1 Tuck the wires in and slide the **sconce** onto the plate, towards the wall.

3.2 Tighten the **2 screws**, one at the top and one at the bottom, to lock it in place.

Restore the power at the main circuit panel.

Your Leonie sconce is ready to switch on.

Final check

- [ ] Power was off during the whole installation.
- [ ] Mounting plate firmly screwed to the wall.
- [ ] Wires joined L to L and N to N, ground fixed.
- [ ] Sconce seated and its 2 screws tight.

Care and maintenance

- **Dust gently** with a soft, dry cloth.
- **Avoid** solvents and abrasive cleaners.
- **Handle with care** to prevent scratches or breakage.
